

Your  
Automation  
Partner

**A to Z Solution**  
Streamline the whole automation process, from test design, through code development and scenario building, to test management and execution.

**Easy and Intuitive UI**  
Don't overload your testing engineers and content experts with raw automation code. Building tests, sets and execution packages is easy, agile and intuitive.

**Cutting Edge Code**  
Give your automation experts the best code framework for building easily maintainable and rich object-oriented automation code.

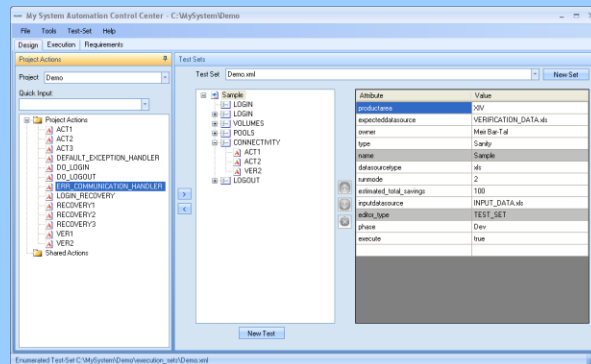

**Code Less, Cover More**  
Reuse your automation entities to increase your coverage without adding a single line of code.

## Enjoy the Best of all Worlds

You've spent a lot of time and effort gathering the very best testing engineers and automation experts. How can you make sure each teammate can fully express his potential?

Instead of forcing your testing engineers and automation experts into a "one-size-fits-all" box, *My System™* offers a suite of tools designed to maximize each of your teammates experience and skills.

## Unleash your Programmers

We believe that automation experts are fully-fledged programmers, and should be given an adequate programming environment to maximize their potential.

*My System™* offers a rich and robust object-oriented framework, designed to allow both out-of-the-box rapid automation, as well as very advanced custom implementations.

Our extendible code framework contains dozens of premade classes; a robust error-handling framework, advanced debugging mechanisms, and built in, customizable data handling and reporting system.

## Build Reliable Automation Solutions

*My System™* will not turn your automation into "Auto-Magic". We don't believe in silver-bullets or hidden-shortcuts. It will, however, enable you to develop reliable solutions in a structured and controlled manner; reduce the project risks, and significantly shorten the time from development and design to actual working test coverage.

## Focus your Testing Engineers

Your testing engineers have no use for raw automation code. They need to remain focused on linking their bird-eye view of the application to coherent and effective test architecture.

*My System™* offers a clean and intuitive test designer, allowing your testing engineers and manual testers to bundle actions to tests, test-sets, and execution packages; No code or automation knowledge is required.
